Dear Hiring Team,

I'm excited to apply for the Senior Software Engineer role with ClassDojo. With 20+ years of experience across startups and larger tech companies, I've delivered scalable products using Node.js, React, AWS, and CI/CD practices while mentoring teams and driving technical excellence.

At ClubSpeed, FloQast, and Zoom+Care, I built distributed systems, modernized platforms, and partnered with product and design to translate business needs into user impact. I thrive in collaborative, Agile environments—whether pair programming, coaching teammates, or shaping engineering culture—and I bring an ownership mindset to every project.

I'd welcome the opportunity to use my expertise to help your team deliver meaningful products that positively impact millions of learners.

Best regards,

Mike Karras
